MaxOut™ Technology Introduces
New Multi-Use Wireless Panic-Alert Device

St. Michael, MN, June 12, 2019 — MaxOut™ Technology is pleased to introduce the Wireless Panic–portable wireless panic/alert device with long-range transmission capability for residential, commercial, and high security applications. The Wireless Panic is compatible with 319.5 MHz wireless security control panels including: Interlogix®*, UTC Interlogix®* 63 bit, GE®*, ITI®*, ELK*, and Qolsys®* formats.

The durable, water-tight Wireless Panic is small in size, powerful with exceptional wireless transmission range, and includes the following attachments:

- Belt clip.
- Lanyard clip.
- Mounting bracket for under desk, under counter, or wall.

Under desk-mounting bracket, Panic -Alert, belt clip, and lanyard clip

When the possibility for emergency situations exist, the Wireless Panic is the ideal wireless silent notification device to signal help in:

- Commercial settings, such as convenience stores, restaurants, and banks.
- Apartment buildings, retirement homes, campuses, and secured facilities.
- Residential homes, especially with detached buildings.

To guard against false alarms, the Wireless Panic will send an alarm signal only if;

- The button is pressed and held for 2 seconds.
- Or the button is quickly pressed two times.

MaxOut Technology advanced wireless sensors and life safety devices are only available through professional security dealers and distributors.

About MaxOut™ Technology

MaxOut™ Technology sensors and life safety devices are engineered to outperform and outlast other wireless sensors. MaxOut™ sensors are different—a difference that can be seen in the precision of the PC board and components, extreme attention to detail is the standard. Details that are vital for fast detection and system response when needed; with no false alarms.

MaxOut™ Technology is:

Experienced

For over 30 years we have been engineering and producing wireless security products|, the same group of people who invented and perfected wireless security systems.

Innovative

Continuous product improvement has resulted in 9 U.S. Patents and groundbreaking development of encrypted security systems.

High Powered

Delivers the maximum allowable FCC output - maximum signal strength and transmission range.

100% Tested

Every device is 100% tested for maximum performance, range, and reliability.

OEM Engineering and Manufacturing

MaxOut™ Technology stands behind many of the security products that are used in residential, commercial, and high security applications today.
